

The Association of Mathematics Teachers of New Jersey was organized on May 23, 1914 led by Harrison E. Webb from Central High School in Newark.

Approximately 50 mathematics educators, men and women, representing public high schools and elementary schools, private schools, teachers' colleges and other colleges within New Jersey were present at the organizational meeting.

The old Central High School building (circa 1914) on High Street in Newark (now known as Martin Luther King Blvd) is now part of the campus of the New Jersey Institute of Technology (NJIT). Photos taken in July 2018 show only the top two floors of the original building facing MLK Jr Blvd due to a newer two story building housing the New Jersey Innovation Institute in front of it.

Note that in 2018 there are air conditioning towers on the top right side

New Jersey Innovation Institute
